Nova Scotia Pharmacare Rules

For more information on Nova Scotia Pharmacare, please visit the Nova Scotia Department of Health and Wellness website at <http://gov.ns.ca/DHW/publications.asp>.

Formulary Drug Pricing

Drug pricing is determined by the formulary status of a drug which is displayed in the ALT+G-View Generic Equivalents window. Drugs that are listed in the formulary belong to **one** of the following three (3) categories:

1. **Maximum Reimbursable Price (MRP)** - MRP is the maximum drug cost established by the Minister under the Insured Prescription Drug Plan that is reimbursed to a provider or a beneficiary for a category of interchangeable products. The beneficiary (i.e. the patient) is not to be charged any cost difference between the Actual Acquisition Cost (AAC) of the drug and the MRP. MRP pricing replaces old MAC pricing.
2. **Pharmacare Reimbursement Price (PRP)** - A PRP is assigned by the Minister to each of the following:
 - a. Certain groups of drugs that are similar in therapeutic effect;
 - b. Specific services for which coverage is established;
 - c. Certain unit dose and special delivery formats that are also available in less expensive bulk formats; and
 - d. Certain different supplies that are used for the same function.

The beneficiary (i.e. the patient) may be charged the cost difference between the AAC of the drug and the PRP unless a PRP exception has been approved. PRP pricing replaces old "Special MAC" pricing.

3. **None (blank)** - This category is a Kroll specific category which is assigned to some drugs to ignore any formulary pricing rules. These are typically brand name drugs.

Dispensing Fees and Mark-ups

The fee schedule published by Nova Scotia Pharmacare states:

- The "Pharmacare Dispensing Fee" is the LESSER of the usual and customary dispensing fee the provider charges to cash customers and the applicable maximum Pharmacare dispensing fee.
- Providers shall fill claims to a **maximum of 100 days' supply**, if prescribed. The Program will not pay multiple fees where a quantity less than the quantity prescribed is dispensed (Exception for Seniors' Pharmacare Program beneficiaries).
- All refills must be a **minimum of 28 days' supply**, except:
 - Refills for intermittent treatment of a chronic disorder;
 - Part refills of methadone; and
 - Others as determined by the Program.

- For the period **August 1st, 2011 to August 31, 2011**:
 - **Ostomy Supplies**: AAC plus 10% (to a maximum of \$50 per prescription), plus a maximum Pharmacare dispensing fee of \$10.73.
 - **Injectables (except insulin)**: AAC or where applicable, MRP or PRP, plus 10% (to a maximum of \$50 per prescription), plus a maximum Pharmacare dispensing fee of \$10.73.
 - **Compounded extemporaneous products (except methadone and injectables)**: AAC plus 2% (to a maximum of \$50 per prescription), and a maximum Pharmacare dispensing fee of \$16.10.
 - **All other prescriptions for drugs or supplies**: AAC plus 2% (to a maximum of \$50 per prescription) or MRP or PRP plus 6% (to a maximum of \$50 per prescription), plus a maximum Pharmacare dispensing fee of \$10.73.

Kroll Pricing Configuration

For all MSI rules to be applied correctly, the **Force Nova Scotia MAC Legislative Requirements** option listed under **File → Configuration → Store → Rx → Pricing** must be enabled.

Drug Price Groups

To properly price prescriptions for Nova Scotia Pharmacare (i.e. MSI), the store requires two **Drug Price Groups**. Other plans in Nova Scotia may use these drug price groups; however, the pricing for MSI is unique and requires a pricing strategy exception to link the drug price group to the MSI SubPlan. The pricing strategy for each of these drug price groups corresponds to the respective pricing strategies:

1. NS MSI (Injectables)
2. NS MSI (Ostomy)

Pricing Strategies

To properly price prescriptions for Nova Scotia Pharmacare, the store requires four **pricing strategies**:

1. **NS MSI (Regular)**:
 - The **Dispensing Fee** is set to **\$10.73**.
 - The **Cost** level is set to pull from **Purchase**.
 - The **Markup** is set to **2% of the Cost** to a maximum of \$50 (threshold value = \$2500).
2. **NS MSI (MRP/PRP)**:
 - The **Dispensing Fee** is set to **\$10.73**.
 - The **Cost** level is set to pull from the higher of **Purchase** and **MRP/PRP**.
 - The configuration option to force Nova Scotia Legislative Requirements will force the price to use the MRP price for applicable drugs.
 - The **Markup** is set to **6% of the Cost** to a maximum of \$50 (threshold value = \$833.33).
3. **NS MSI (Mixture)**:
 - The **Dispensing Fee** is set to **\$16.10**.
 - The **Cost** level is set to pull from **Purchase**.
 - The **Markup** is set to **2% of the cost** to a maximum of \$50 (threshold value = \$2500).

4. **NS MSI (Injectables):**

- The **Dispensing Fee** is set to **\$10.73**.
- The **Cost** level is set to pull from **MRP/PRP** if available, and **Purchase** price if MRP/PRP does not exist.
- The **Markup** is set to **10% of the cost** to a maximum of \$50 (threshold value = \$500).

5. **NS MSI (Ostomy):**

- The **Dispensing Fee** is set to **\$10.73**.
- The **Cost** level is set to pull from **Purchase**.
- The **Markup** is set to **10% of the cost** to a maximum of \$50 (threshold value = \$500).

Sub Plan

To properly price prescriptions for **MSI Pharmacare (NS)**, MSI SubPlan pricing should be configured as follows:

- Regular Drugs = NS MSI (Regular)
- Formulary Drugs = NS MSI (MRP/PRP)
- Mixtures = NS MSI (Mixtures)

Prescription Pricing

For **Formulary Drugs**, the **NS MSI (MRP/PRP)** pricing strategy is configured to use the higher of **AAC** and **MRP/PRP** to calculate prescription price. Enabling the “**Force Nova Scotia MAC (i.e. MRP) Legislative Requirements**” configuration in **File → Configuration → Store → Rx → Pricing** will apply all formulary rules to the prescription.

For **Regular Drugs**, the **NS MSI (Regular)** pricing strategy is configured to always use **AAC** to calculate prescription price.

When Kroll publishes a formulary update, the **MRP/PRP** cost on the drug pack will only be set on products that are listed in the MSI MRP/PRP price list. Products that do not have an MRP or PRP price specified by Nova Scotia Pharmacare will have their **MRP/PRP** cost blanked out by the update.

When a drug has **PRP** pricing, the prescription will be priced with the higher of **AAC** and **PRP**. This will allow the pharmacy to claim the maximum amount they can from MSI, and allow them to charge the difference to the patient if they choose.

For drugs flagged as **MRP/PRP**, the system will try to follow one of the applicable pricing strategies explained previously. However, a prescription will always use the **MRP/PRP** price (ignoring a higher Acquisition Cost) if the following conditions are met:

- You are filling for an injection and MRP/PRP price is available.
- You are filling for a drug, not a mixture.
- The Force Nova Scotia Legislative Requirements flag is turned on in Store Configurations.
- The Product Selection is not set to Prescriber’s Choice or Patient’s Choice
